Career & Technical Education

MyAutomotiveLab Overview

MyAutomotiveLab fosters engagement both within and outside the classroom, helping students better prepare for class, quizzes, and exams—resulting in improved performance in the course. A powerful homework and test manager lets you create, import, and manage online homework assignments, quizzes, and tests that are automatically graded.

Highlights of this fully integrated learning program include:

Diagnostic Practice Twenty-four substantial diagnostic cases (with three in each ASE area) challenge students to use their knowledge and critical-thinking skills as they analyze customer complaints, diagnose problems, and select the appropriate repairs.

ASE Test Prep Preparing students for a successful automotive career often means preparing them for ASE certification. To help students prepare, MyAutomotiveLab now features 800 ASE-style questions (100 per ASE area) so that you can easily assign students full-length, automatically-graded tests for each ASE area, see time on task, and set a time limit.

Standards-aligned Content To give students practice and review on critical professional skills, you can now easily sort and assign MyAutomotiveLabcontent by Maintenance and Light Repair (MLR), Automobile Service Technician (AST), or Master Automotive Service Technician (MAST) NATEF tasks. A robust gradebook facilitates convenient performance by standard reporting during course, program, or accreditation review.

Pre-Test and Post-Test Quickly diagnose your students' comprehension with automatically-graded Pre-Tests and Post-Tests that give students immediate feedback. Depending on where they need help, instructors can assign animations and video activities to help students learn and practice the content they did not master.

Video and Labeling Activities To promote student success, over 250 brand-new, detailed video-based activities demonstrate difficult skills and con-cepts and contain voice-over explanations and instructional tips. Instructors may use the videos for in-class demonstrations or students may use them outside of class for review. Each video includes follow-up questions that are auto-grad- ed and feed directly to the gradebook, saving you time.
