Getting Started with Savvas Realize

Navigate Content

Navigate the Home Page

Now you’re ready to explore your digital content. But where do you start? Let’s check out the Table of Contents!

The curriculum you selected in your Profile Settings now show up in the Programs area. Click a program to view the Table of Contents.
The TOC displays the program content, assessments, tools, and activities. Click on an item in the Table of Contents to view the unit items. Use the options under the content to view and assign items to students.

The panel on the right contains quick links to the Create Content menu, where you can upload your own content, add web links, build a test, and more!

Want to rearrange the TOC to fit your teaching style? Great! Click Rearrange and drag and drop to move items up and down. What about content you don’t need? Just hide it.

Click My content to view uploaded files, links, or tests you have built.
Click **Teacher Resources** to view even more materials you can use to extend or differentiate instruction. Items that are for teacher use only have a lock icon next to the title. Teacher resources vary based on where you are in the TOC.
See the tabs above the TOC? Let’s check those out!

The **Resources** tab provides a different way to view the same content that’s listed in the Table of Contents, but with search and filter capabilities. Click the links in the left panel to filter the results. Use the Search bar above the Resource list to search for a specific item.
Click **Standards** at the top of the page, then select a standard to view the standards associated with your program. Click the links on the left to filter the results by grade, teacher, category, or other criteria.
Select **Leveled Readers** to find reading material for your students. Choose a leveling scale for the readers, then adjust the range level in the line graph to conduct a search. Each program will have unique features, like this one for reading programs.
Click **eText** to access the Teacher and Student Editions, and any other digital books associated with your program.
Click **Tools** to view additional teacher and student resources available for your program, such as trade books, learning games, glossaries, and other interactive tools.

Now that you know where everything is, you can start exploring content to create assignments!
