Hi, and welcome to My Savvas Training. In this tutorial, you will learn how to use the new Early Learning Theme available on Savvas Realize™.
Savvas Realize now has a choice of user interfaces—the traditional theme you are used to and a new theme called the Early Learning Theme.

The Default Theme is what a student will see if you have not specifically set the Early Learning Theme for the student or the student's class. This theme is designed to meet most students' needs in Grades 3 through 12.

The Early Learning Theme is designed to appeal to younger students and students who may struggle with the Default Theme's more text-heavy navigation. This offers a simpler interface for Savvas Realize and Savvas Realize Reader.
You can change the student theme for individual students or for an entire class. The Early Learning Theme is designed for typical users in Grades K through 2, but you can use it for older students as well.

For example, you may want to use the Early Learning Theme for your entire class if you will be using Savvas Realize with Kindergarten students.

Or, you may want to use it in a third- or fourth-grade class just for those students who are struggling to navigate the default Savvas Realize interface.

You can choose a theme to select an experience for your students that best supports their unique skill levels and learning styles.
To change the student theme for your entire class, access the Class Settings area.

1. First, click **CLASSES** in the menu bar at the top of the page.

2. From the list of classes, find the class that you want to work with, and click the **Class settings** link under the class name.

3. In the **Choose the student theme** section, select **Early Learning Theme**. The theme will apply to all students assigned to this class.

4. Then, click the **Save** button when you are finished with your changes.

Students will see the Early Learning Theme the next time they log in to Savvas Realize.
Change Themes for Individual Students

To change the student theme for a group or individual students, access the Students & Groups area.

1. First, click CLASSES in the menu bar at the top of the page.
2. Then, find the class that contains the student or group that you want to work with, and click the Students & Groups link under the name of the class.
3. Click the Change student theme link above the student list, and then select the check box next to the students for which you want to use the Early Learning Theme. Choose the Select or deselect all students option to select all students in that group. Clear the check box to revert the student theme back to the default.
4. Click Save when you are done with your selections.

In the list of students, an Early Learning Theme icon displays next to each student who has the Early Learning Theme set.

Students will see the Early Learning Theme the next time they log in to Savvas Realize.
Once a student assigned to the Early Learning Theme logs in, they will see their home page. The navigation on this page is simplified with just two icons—My Work and Explore.

Students click My Work to see Assignments, eTexts, and Tools. Because the Early Learning Theme is a simplified interface for students, students using this theme do not have access to Comments or Discussions.

Students can always get to the home page by clicking the Savvas Realize logo at the top left of the menu bar on any page.
On the Assignments page, students can see and complete their assignments and submit them to teachers.

By default, students will land on the Assignments page when they click My Work. To find an assignment, students can scroll down the assignments list to find the assignment that they wish to complete. Students can access eTexts, download PDFs, or work through online assignments.

On the Assignments page, click the Get started button next to the assignment to start an assignment.

If students have assignments in progress, they click the Keep going button to continue their work.

Students click the Exit button to return to the Assignment page.

To submit their work, students click the Turn in button on the Assignment listing. They will see a notification when their work is submitted successfully. The assignment is submitted as complete to teacher.

Once a student submits an assignment, the item listing moves to the Completed Work page. Click Completed Work to view a student's completed assignments.
eTexts are online textbooks that you can assign to help students learn the class material.

To see eText items, students click the eTexts button. On the eTexts page, they click Open eText next to the eText they wish to use.

Note: Only Savvas Realize Reader eTexts can use the Early Learning Theme.
Tools are extra activities to help students learn the material. They include online games, glossaries, and special activities.

To see the tools for their program, students click the Open Tool button next to the resource they wish to use in a new tab.
The Explore button from the Early Learning Theme home page provides students with access to the programs available to them.
Students click their names in the upper-right corner of the screen to access the Settings and Help areas and to sign out of their accounts. In **Settings**, students can change the language they see in Savvas Realize to either English or Spanish.

Students also use this area to **Sign Out** of Savvas Realize.
